Tecnología exclusiva Précontraint®

Esta tecnología única, patentada en todo el mundo, consiste en mantener el composite en tensión biaxial durante todo el ciclo de fabricación. Confiere a nuestros materiales unas prestaciones excepcionales, permitiéndoles superar los estándares del mercado en cuanto a estabilidad dimensional, resistencia mecánica, espesor del revestimiento y planitud.

1	Refuerzo de microcables de poliéster de alta tenacidad	Resistencia superior al alargamiento y al desgarro
2	Resistencia superior al alargamiento y al desgarro	Sin deformación durante la instalación y el uso
3	Recubrimiento superior de la cresta del hilo y tratamiento superficial repelente de la suciedad	Estética y durabilidad mecánica superiores
4	Extremadamente plano y fino	Superficie lisa y fácil de limpiar, ocupa poco espacio y es fácil de enrollar
